

LeaseAccelerator Asset Lifecycle Manager™

Take control of real estate spaces and equipment assets

Many organizations lack visibility and automation across their lease portfolio, making it difficult to properly manage changes like subleases, impairments, and early returns. In addition, lack of integration across lease accounting, real estate lease administration, and sourcing applications results in an incomplete view of the status of leased assets.

With LeaseAccelerator Asset Lifecycle Manager, organizations can optimize the way they use, manage, and dispose of leased assets while maximizing performance, efficiency, and resources. Automating the asset lifecycle reduces errors and risk, driving down costs and helping you realize the savings you planned by leasing. From bulk import and modifications to workflows and notifications, our application delivers better asset tracking and ROI.

Key features

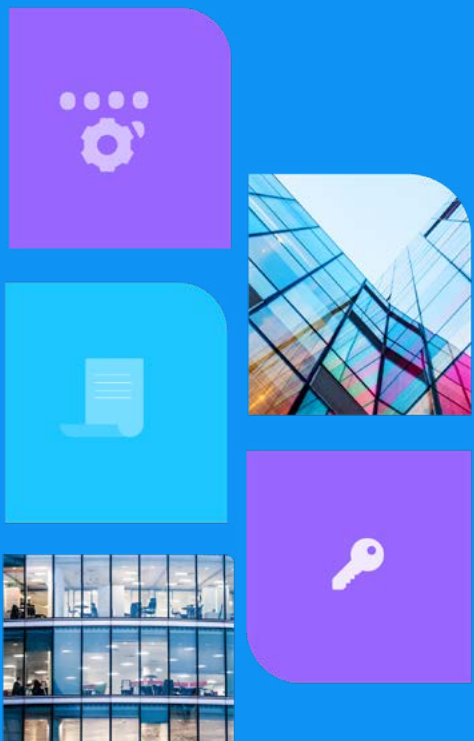

Asset Lifecycle Manager provides end-to-end control of real estate spaces and equipment assets through:

- ✓ **Bulk import and validation**
- ✓ **Automated attestations**
- ✓ **Notifications and scheduling of lease activities**
- ✓ **Configurable workflows for better asset management**
- ✓ **Task management**
- ✓ **Stakeholder reporting**
- ✓ **Mid-term and end-of-term event management**

Benefits

With Asset Lifecycle Manager, organizations can reduce their leasing costs by 10-12% with better end-of-term management, reduced manual effort, and improved control of their leased assets with:

- ✓ More assets returned on time
- ✓ Better critical dates management
- ✓ Reduced evergreen payments
- ✓ Better insight into value of leasing
- ✓ More accurate lease data
