

LeaseAccelerator University

Get compliant faster with integrated, interactive education

With role-based lease accounting education, LeaseAccelerator University ensures your team is productive from the start. LeaseAccelerator University provides a safe practice environment for up to 10 users with your LeaseAccelerator subscription. More users can be purchased separately as your team changes, reducing the impact of resource shifts and attrition.

Using hands-on walk-throughs, videos, field-level help text, and assessments, we build critical skills from end-to-end configuration to loading and managing lease data, tracking progress at each step. After your users are certified, they get access to the production environment.

Once in the production environment, you can launch our in-app assistant Ask Alex to walk through any part of the product and get help in real-time. You can also use the onboarding checklist in Ask Alex to get new team members started if they don't need the full product certification.

*New customers are allocated 10 free users for LAU as part of their implementation.

LeaseAccelerator University packages

	Buy 2 get 1 free	Buy 4 get 3 free	Buy 6 get 4 free
1 user/environment \$2,500	3 users/environments \$5,000	7 users/environments \$10,000	10 users/environments \$15,000
Best value			
Ongoing Replenishing set of 3 users/environments every 60 days for 1 year \$20,000			

Role-based practice environments

Our practice environments have been preconfigured to accommodate the various user roles necessary to implement, manage, and maintain the LeaseAccelerator application.

Implementation	<ul style="list-style-type: none"> Implementation practice environments have very little data preconfigured to allow for maximum learning potential. These practice environments are assigned to users who occupy a Partner or Implementation Team role. Those users are considered administrators of LeaseAccelerator software. They are responsible for establishment of policy level definitions and assist with solution architecture on behalf of their organization.
Center of Excellence	<ul style="list-style-type: none"> COE company practice environments have a moderate amount of data preconfigured. These practice environments should be deployed for users who occupy a COE Team role. COE users do NOT establish tenant-level parameters; they act as managers of LeaseAccelerator data and establish/ensure procedural standards.
Daily User	<ul style="list-style-type: none"> Daily User practice environments have a fully preconfigured environment. These practice environments should be deployed for users who occupy operational daily user roles. The Daily User practice environment allows users to focus on maintenance, with concentration on proper data entry and effective execution of process workflows.
