

# Encryption at Rest

Enhanced security of your data

**In addition to LeaseAccelerator's enterprise-grade security practices, we offer increased protection for your leasing data with powerful custom encryption keys managed through Amazon Web Services (AWS) Key Management Service.**

Data privacy is essential for organizations in all industries. It is more important now than ever to ensure that sensitive company data and personal data are well-protected. LeaseAccelerator provides all customers with standard data encryption through Amazon Relational Database Service (RDS), maintaining a high data protection level.

However, standard data encryption might not be enough to ensure data security for regulatory and compliance purposes as well as business continuity protocols. Encryption at Rest adds another layer of protection to your organization's data so that only authorized personnel with the encryption key can access sensitive information, thus guaranteeing that your data stays secure and well-protected.

Encryption at Rest is a highly scalable solution that protects your company's data and establishes long-term compliance. It expands the protections around your company data using the Amazon Web Services (AWS) Key Management Service, enhancing reliability and security for critical production databases, including automated backups and database snapshots.

LeaseAccelerator provides a global lease lifecycle automation platform that improves free cash flow and ensures long-term compliance across equipment and real estate assets. Thousands of users rely on our Software as a Service (SaaS) platform to manage and automate 700,000 leases valued at \$200 billion across 5 million assets in 172 countries that generated 8 billion journal entries.
